

## Confluence 2.6 : Linking to Attachments

This page last changed on Oct 18, 2007 by [smaddox](#).

Once you have [attached a file](#) to a page, you can easily provide a link to it from the page.

This page tells you how to use Wiki Markup to link to an attachment. You can also use the [Rich Text editor](#) to link to an attachment.

 Images are a special form of attachment. Read about [displaying images on a page](#).

### Linking to an attachment on a page

You can link to images and other types of attachments like this:

What you need to type	What you will get
<code>[PDF document about linking to attachments] ^Linking to attachments attachments.pdf]</code>	<a href="#">PDF document about linking to attachments</a>

Where:

'Linking to attachments.pdf' is the name of the file you want to link to.

### Linking to an attachment on another page

You can link to any attachment on your Confluence site using the following syntax:

Attached to another page in the same space:

```
[link alias|pagetitle^attachment.ext|link tip]
```

Attached to another page in another space:

```
[link alias|spacekey:pagetitle^attachment.ext|link tip]
```

Optionally,

- use an alias to refer to the attachment.
- provide a link tip for the link.
